

QC PathFinder AUR Reporting 16.0

Real Time Data; Real Life Results

A Single Surveillance Platform

MU Stage 3 (MU3) Incentive Payments

QC PathFinder's AUR Reporting platform has earned Meaningful Use Stage 3 (MU3) certification, validating its ability to collect and properly report data encompassing antimicrobial use and resistance. AUR Reporting enables you to efficiently collect and report AUR data and secure your incentive payments without additional work by your staff!

Monitor

Antimicrobial stewards will be empowered by the platform's automated data reporting to drive organizational change with real-time longitudinal data on antimicrobial use and resistance.

Identify, Understand & Respond

Compute days of therapy per antimicrobial along with hospital antibiograms to drive antimicrobial stewardship. Identify actionable recommendations for safe-guarding efficacy of key antimicrobials by preventing over use.

Reporting

Make the job easier for your staff with automated NHSN submissions for Antimicrobial Use/Antimicrobial Resistance reports. AUR Reporting works with the lab data QC PathFinder is already receiving.
